

Total Statistical Support for Medical Devices

Providing proof of medical benefit and safety for **medical devices** demands an ever-increasing need to generate supporting evidence from clinical trials.

With extensive experience of providing statistical consulting to the **pharmaceutical and medical device industries**, Numerus supports all aspects of clinical trial design and analysis, including the evaluation of added benefit needed to support **market access**.

Do you find yourself asking any of the following questions?

- How many patients / samples do I require?
- Which statistical analyses should I be using?
- My device is classified in class IIb/III, what data do I need for the conformity assessment?
- What is comparative effectiveness?
- What data do I need for reimbursement?

Let us bear the burden

We understand that not everyone can (or wants to) be an expert in statistics.

At Numerus, we can provide the comprehensive statistical support you need for successful market entry of your medical device.
